GRAPH_RICCI_CURVATURE

1.1 graph_ricci_curvature package

1.1.1 Submodules

1.1.2 graph_ricci_curvature.graph_metric module

class graph_ricci_curvature.graph_metric.**GraphMetric**(*G: Graph, weight_key*)

Bases: ABC

Parent class for classes calculating properties of a graph

Parameters

G

[networkx graph] Input graph

weight_key

[str] key to specify edge weights in networkx dictionary

1.1.3 graph_ricci_curvature.ollivier_ricci_curvature module

References:

- Ollivier, Y. 2009. “Ricci curvature of Markov chains on metric spaces”. Journal of Functional Analysis, 256(3), 810-864.
- Sandhu et al. 2015. “Graph Curvature for Differentiating Cancer Networks”. Scientific Reports. DOI: 10.1038/srep12323

class graph_ricci_curvature.ollivier_ricci_curvature.**OllivierRicciCurvature**(*G: Graph,*
weight_key='weight')

Bases: *RicciCurvature*

Class for calculating Ollivier Ricci Curvature

Parameters

G

[networkx graph] Input graph

weight_key

[str] key to specify edge weights in networkx dictionary.

calculate_edge_curvature(*source_node, target_node, alpha=0.5*)

Calculate value of Ricci Curvature tensor associated with an edge between a source and target node defined as

$1 - (\text{Wasserstein 1 Distance} / \text{Edge Weight})$

Parameters

source_node

[int or tuple] index of source_node in graph self.G

target_node

[int or tuple] index of target node in graph self.G

alpha

[float] hyperparameter ($0 \leq \alpha \leq 1$) determining how much mass to move from node

Returns

curvature

[float] value of curvature tensor

calculate_ricci_curvature(*alpha=0.5, norm=True*)

Calculate nonzero values of Ricci curvature tensor for all edges in graph self.G

Parameters

alpha

[float] hyperparameter ($0 \leq \alpha \leq 1$) determining how much mass to move from node

norm

[bool] if True, normalize nodal scalar curvature

Returns

self.G

[networkx graph] Returns graph with ricci_curvature as node and edge attributes

1.1.4 graph_ricci_curvature.ricci_curvature module

class graph_ricci_curvature.ricci_curvature.RicciCurvature(*G: Graph, weight_key*)

Bases: [*GraphMetric*](#)

Class for storing information about the Ricci Curvature Tensor

Parameters

G

[networkx graph] Input graph

weight_key

[str] key to specify edge weights in networkx dictionary. Default = weight

1.1.5 Module contents

INDICES AND TABLES

- `genindex`
- `modindex`
- `search`

PYTHON MODULE INDEX
